WORLDWIDE NETWORK

CCS has a world-wide network to support you throughout the world.

We are dedicated to provide you with the optimal lighting solution for image processing applications to improve product quality and production yield.

INTRODUCTION

With the EL Series, CCS brings to the market a new range of high-quality plug & play lighting that achieves an innovative advancement in flexible design. The new EL Series includes bar lights and ring lights, which have built-in controllers that deliver auto-strobe functionality. The auto-strobe functionality allows for easy and safe overdriving, as well as a continuous mode. The EL Series also includes back lights and flat lights with a camera hole, both with integrated dimming controllers, for inspections with a large field of view

Utilizing innovative technology, the EL Series delivers a unique flexibility and convenience to Machine Vision lighting. Lenses can be adjusted by hand to control the emission angle of the light beam. In addition to the size of the light and different wavelengths, users can choose from three different diffusers and other optical accessories to easily design their optimal lighting solution.

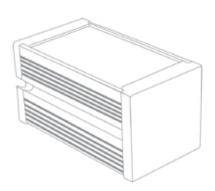

The EL Series expands the current line-up with IP options (IP67 and IP69K) for inspection applications affected by high-exposure to dust or water, such as the food-processing and pharmaceutical industries. The EL Series also includes structured LED lighting designed for 3D reconstruction, stereovision, and alignment applications using interchangeable masks to project the desired pattern clearly at a powerful output.

MACHINE VISION LIGHTING

FLOOD TYPE BAR LIGHT

LELB SERIES

The ELB Series is a **high-power** flood type bar light designed around flexibility to answer the needs of many machine vision applications.

With the ELB Series, it is easy to adjust the product mechanically, optically, and electronically. This makes it easy for the ELB Series to adapt to any application requirement. For instance, users can select the correct lens position depending on the irradiation distance. The ELB Series is also shipped with three different diffuser plates, so that the uniformity can be adjusted to the needs of the user.

When compared to continuous mode, the **integrated controller** with **auto-strobe** functionality allows for a 300% increase in intensity while being strobed.

OPTICAL FLEXIBILITY

How to change the configuration of the ELB

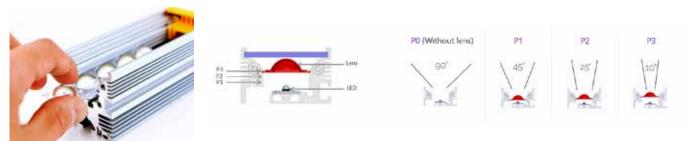

Diffuser

The ELB Series is shipped with three different diffusers. Depending on the uniformity needed for the application, the user can select and easily change to the diffuser that fulfills the application requirements.

Lens Position

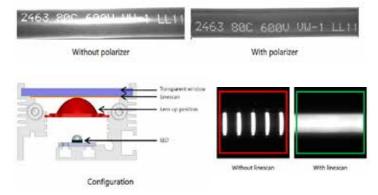

The lens position of the ELB Series is flexible and can easily be adjusted depending on the irradiation distance.

Optical options

With the polarizer for the ELB Series, it is possible to eliminate glare from your workpiece, making it easier to acquire a suitable image for your application.

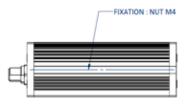

The ELB Series also offers a linescan accessory, transforming the ELB Series into a line light useable as either a brightfield or darkfield illumination.

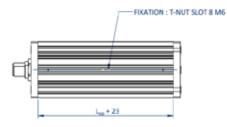

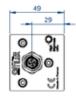

When the lens is positioned in P3, the polarizer and the linescan accessory cannot be used together. If necessary, a thinner polarizer is available.

The L2 version: ELB-L2

The ELB Series is also available with 1 led on every 2 positions, which is called the ELB-L2 Series. For further information, please contact your CCS representative.

HIGH POWER SMART BRICK LIGHT

LELSB SERIES

The ELSB Series has a double row of **high-powered** LEDs for more intensity. This answers the need for a higher intensity that comes with the increase in line speeds of machine vision applications.

Like the ELB Series, the ELSB is highly **flexible** and allows for easy adjustment of the lens position and diffuser plates. The ELSB Series has an **IP67 rating** to cope with hasher working environments, where dust and water are constant factors.

The **integrated controller** of the ELSB Series offers flexibility to the user. With this integrated controller, the user can **dim** the ELSB Series to the required illumination level. The user can also make use of the **auto-strobe** functionality, increasing the intensity with 700%.

MAIN FEATURES

APPLICATIONS

OPTICAL FLEXIBILITY

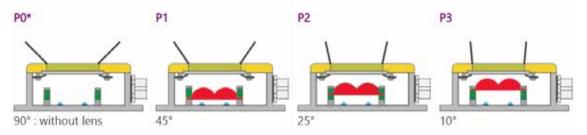

Diffuser

The ELSB Series is shipped with three different diffusers. Depending on the uniformity needed for the application, the user can select and easily change to the diffuser that fulfills the application requirements.

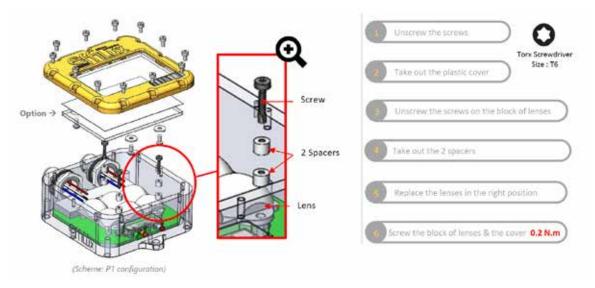

Lens Position

The lens position of the ELSB Series is flexible and can easily be adjusted depending on the irradiation distance.

How to change the configuration of the ELSB

The position of the lens array can be configured by adjusting the two spacers inside the ELSB Series. Please note that opening the product might compromise the IP-rating, if not closed properly afterwards.

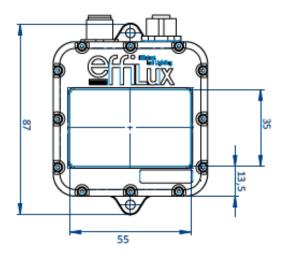

Optical option

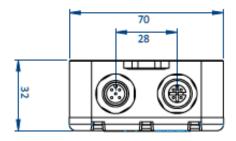

With the polarizer for the ELB Series, it is possible to eliminate glare from your workpiece, making it easier to acquire a suitable image for your application.

OPTICAL FLEXIBILITY

How to change the configuration of the ELR

The numbers 1, 2 and 3 are inscribed in the lens and correspond to the lens position. Match the number of the desired position with the outgrowth of the cover.

Please note that opening the product might compromise the IP-rating, if not closed properly afterwards.

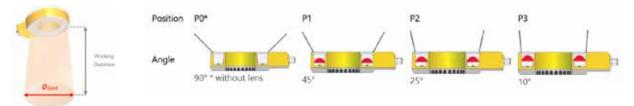

Diffuser

The ELR Series is shipped with three different diffusers. Depending on the uniformity needed for the application, the user can select and easily change to the diffuser that fulfills the application requirements.

Lens Position

The lens position of the ELR Series is flexible and can easily be adjusted depending on the irradiation distance.

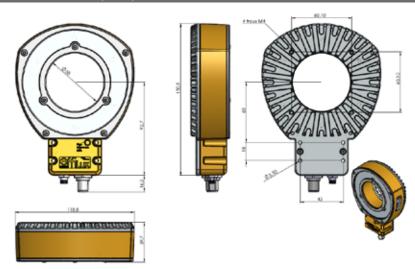

Optical option

With the polarizer for the ELR Series, it is possible to eliminate glare from your workpiece, making it easier to acquire a suitable image for your application.

3D PROJECTOR

_ELL SERIES

The ELL Series is a **structured light source**, which is ideal for 3D reconstruction applications or Stereo Vision applications.

This series offers great accuracy by using C-mount lens projection. The ELL Series offers three different masks: **Line**, **Grid**, or **Cloud of Dots**.

Since the ELL Series is a LED-based lighting solution, it is available in different colors. Furthermore, users do not have to worry about the speckle problem, eye safety, or lifetime issues. This makes the ELL Series the ideal substitute for lasers.

MAIN FEATURES

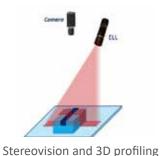

Very intense and uniform illuminated area Long lifetime and minimal maintenance Compatible with most objectives (C-Mount) High depth of field for line version No speckle

	PV (passive cooling) version	CP (compact) version
Connector	M12 - 5 contacts	M8 - 8 contacts
Power supply	24VDC	Direct current (No driver = No protection)
Illumination mode	Strobe or continuous mode	Strobe mode only
Available wavelength	White, Blue, Green, Red, IR	White, Blue, Green, Red, IR

ELECTRONICAL CONSIDERATIONS - PV VERSION

When using the ELL Series, please use a 24VDC power supply.

Contact arrangement	Number	Color Contact	Designation
	1	Brown	+24V
	2	White	NPN TRIGGER (trigger on falling edge] for auto-strobe Light ON if V _{NPN} < 1.5V DC max 24V - Analog Voltage

	5	Grey	AIC: Analog Intensity Control for Dimming Control (If AIC is not connected, the light will light on at 100% as if VAIC = 24V. If you do not need to adjust light level, do not connect/use this PIN) Suggested dimming range: min 5V - max 24V

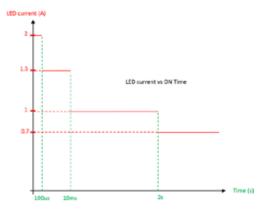

SERIES STRUCTURED LIGHT

Autostrobe feature and continuous mode

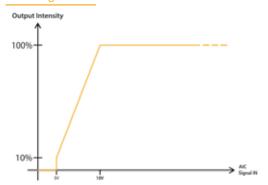

The integrated auto-strobe controller in the ELL Series is set to automatically strobe the LED. When the ELL Series is trigger shorter than 100µs, the LEDs are automatically overdriven at 2A. When the trigger is longer than 100µs, the ELL Series will automatically decrease the current to protect the LEDs.

If the duty cycle is larger than 0.3, the ELL Series will enter a protection mode to protect the LEDs and will stay off for 2 seconds. The ELL Series will check every 2 seconds if this duty cycle is maintained.

When using the ELL Series in continuous mode (set trigger continuously), the LED swill be driven at 700mA.

Dimming control

By adjusting the analog tension, light intensity can be controlled from 10% to 100%.

If the Input AIC is not connected, the ELL will act as if AIC was set at 24V.

ELECTRONICAL CONSIDERATIONS - CP VERSION
